

A Heart Full of Gratitude

As I sat down to write this month's newsletter, I couldn't think about anything except gratitude. Over the past two months, so many of you have asked about Aaron, stopped by our bake sale, shared words of encouragement, and even made donations to help him attend the AMDA High School Conservatory in New York City. Your kindness has been overwhelming.

As parents, we spend so much time hoping our children will have opportunities to pursue the gifts they've been given. Aaron was able to spend two incredible weeks learning from Broadway professionals, growing as a performer, and making friendships with students from all over the world. It was an experience he'll carry with him for the rest of his life.

One of the greatest blessings of owning a small, family practice is that our patients become so much more than patients. You celebrate our joys, ask about our children, and genuinely care about what's happening in our lives. We never take that for granted. Thank you for believing in Aaron and for believing in our family. We are incredibly grateful for your support, your encouragement, and the community we've built together. I've included one of my favorite photos from his time at AMDA. I hope it makes you smile as much as it does me.

-Nichole

DR. CHRIS'S CORNER

For decades, traditional dentistry had a built-in frustrating phase. You'd come in for an exam, we'd look at an X-ray, and I'd point out a small spot where enamel was starting to break down. Because it hadn't turned into a full cavity yet, we'd say: "We'll keep an eye on this and watch it." Basically, we were waiting for the tooth to break down just enough to justify drilling and filling it.

I've always felt there had to be a better way than playing a waiting game with your health. Dentistry should be about preserving as much natural, healthy tooth structure as possible—not waiting until we have a reason to take a handpiece to it.

That's why I am so thrilled to bring a game-changing treatment called **Curodont™ Repair** into our practice this month. Instead of watching an early soft spot turn into a cavity, Curodont™ allows us to actively rebuild and remineralize the enamel before a hole ever forms. It requires no drilling, no shots, and zero pain.

As a dentist, my goal isn't just to fix problems—it's to prevent them using the best science available. Curodont™ represents a major shift toward true regenerative dental care, and I can't wait for our patients to benefit from it.

- A Heartfelt "Thank You" from Nichole
- Dr. Chris's Corner
- Meet our new Dental Hygienist!
- Stop Cavities Without a Drill!
- August Patient Referral Program

WE HAVE AN EXCITING ANNOUNCEMENT!

Meet Sarah, our new Dental Hygienist who is here on Tuesdays & Wednesdays!

Sarah

Spot & Stop Cavities Without a Drill: Introducing Curodont™ Repair

We've all been there: sitting in the dental chair, hoping you hear the words "Everything looks great, no cavities!" But what happens when a spot is caught right on the edge of becoming a problem? Traditionally, your options were limited to waiting for the decay to worsen or drilling into the tooth to place a filling.

Today, our office is excited to offer a modern third option: guided enamel remineralization with Curodont Repair.

How Does Curodont™ Work?

When acid-producing bacteria strip minerals from your enamel, early decay (demineralization) begins below the surface. Curodont™ reverses this process using a specialized peptide formula:

1. Paint-On Application: *Your hygienist or dentist gently cleans the tooth and paints the clear liquid solution onto the early spot.*
2. Deep Penetration: *Within 5-10 minutes, the solution soaks down into the tiny pores of the damaged enamel.*
3. Natural Rebuilding: *The liquid creates a tiny scaffold inside the tooth that draws calcium and phosphate from your natural saliva to rebuild hard, healthy enamel over the next few weeks.*

Why Patients Love It: The Curodont™ Advantage

- Zero Drills, Shots, or Numbing: The entire process is completely painless and non-invasive.
- Quick & Convenient: Application takes less than 10 minutes during your regular cleaning appointment.
- Preserves Natural Tooth: Keeps your natural enamel intact rather than removing sound tooth structure for a filling.
- Great for All Ages: Perfect for kids, adults prone to early spots, and orthodontic patients with white spots after braces.

Questions? Ask us about Curodont™ at your next visit!

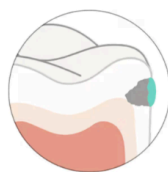

The Science Behind Curodont Repair

Don't just take our word for it—Curodont Repair Fluoride Plus is backed by extensive international research.

- Published in the Journal of the American Dental Association (JADA): Clinical trials show that self-assembling peptides actively rebuild damaged enamel from the inside out, drastically reducing the chance that an early spot turns into a physical cavity.
- Biomimetic Innovation: Developed in Switzerland, this technology works with your body by creating a 3D matrix inside the microscopic pores of your tooth, attracting natural calcium and phosphate from your saliva to regenerate healthy enamel.

Want to read the full clinical study? Search *JADA Keeper et al. (2023) Curodont Meta-Analysis*.

EARLY DECAY TO REMINERALIZATION

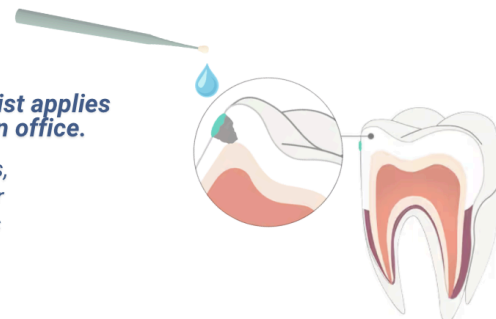

Early Decay

The demineralization occurs below the surface that is still intact.

Curodont™ Repair

Our dental hygienist applies Curodont Repair in office.

Within 5-10 minutes, the Curodont Repair technology diffuses into the lesion.

Remineralization

Once inside the tooth, this breakthrough technology attracts minerals from saliva and remineralizes the cavity over the next few weeks.

ABOVE: HOW CURODONT™ TRANSFORMS EARLY DECAY INTO REMINERALIZED ENAMEL.

Do you know someone who's looking for a dentist? A referral is the highest compliment we can receive—and we'd be honored to care for your friends and family.

Anyone that refers a new patient to Sandia View Family Dental who books their first appointment during August will be entered to win a 24oz. Owala FreeSip Water Bottle!
